### Attending to the Standards for Mathematical Practice

Students explain that they need to rewrite quadratic expressions into equivalent factored forms to find the zeros of the function it defines (MP.7). Using technology, students change the exponents to reinforce their understanding of exponent properties (MP.5).

Essential Standards	Sample Learning Intentions & Success Criteria	HQIR/Resource Considerations
---------------------	---	------------------------------

### Cluster: Understand the relationship between zeros and factors of polynomials.

<p><b>KY.HS.A.7</b> Identify roots of polynomials when suitable factorizations are available. Know these roots become the zeros (x-intercepts) for the corresponding polynomial function. <b>MP.2, MP.5, MP.7</b></p> <p>Considerations: Methods of finding roots could include, but are not limited to: • factoring • synthetic division • long division • an analysis of the graph (created by hand or through use of technology).</p> <p><i>Supporting Standard: KY.HS.F.5</i></p>	<p>We are learning to find the solutions (roots) of factorable polynomial equations and how they appear on the graph as x-intercepts (zeros).</p> <ul style="list-style-type: none"> <li>I can factor and find roots from factored polynomials.</li> <li>I can explain why roots are solutions and zeros are x-intercepts.</li> <li>I can sketch, graph, and connect the solutions to what the graph looks like.</li> </ul>	<ul style="list-style-type: none"> <li>Lesson 9-2: Solving Quadratic Equations by Factoring</li> <li><span style="color: red; font-weight: bold;">!</span> first and second degree polynomials only</li> </ul>
---	---	--

### Attending to the Standards for Mathematical Practice

Students reason quantitatively as they select a method for finding roots and justify their selection and application (MP. 2).

Students use technology to identify the x-intercepts from a polynomial graph and explain that the x-intercepts are zeros and therefore roots of the polynomials (MP.5).

## High School Algebra 1 Topic 9 - FCPS 2025-2026

Essential Standards	Sample Learning Intentions & Success Criteria	HQIR/Resource Considerations
Cluster: Solve equations and inequalities in one variable.		
<p><b>KY.HS.A.19</b> Solve quadratic equations in one variable.</p> <p>a. Solve quadratic equations by taking square roots, the quadratic formula, and factoring, as appropriate to the initial form of the equation. <del>Recognize when the quadratic formula gives complex solutions and write them as <math>a ± bi</math> for real numbers <math>a</math> and <math>b</math>.</del></p> <p>b. (+) Use the method of completing the square to transform any quadratic equation in <math>x</math> into an equation of the form <math>(x - p)^2 = q</math> with the same solutions. Derive the quadratic formula from this form.</p> <p>c. (+) Solve quadratic equations by completing the square.</p> <p>Considerations: Students observe that methods for solving quadratic equations are interrelated, and certain situations may more appropriately call upon one method than the other.</p> <p><i>Supporting Standard: KY.HS.F.5, KY.HS.A.19</i></p>	<p>I am learning to solve quadratic equations in one variable.</p> <ul style="list-style-type: none"> <li>● I can solve quadratic equations by inspection (e.g., for <math>x^2 = 49</math>), taking square roots, completing the square, the quadratic formula, and factoring.</li> <li>● I can determine appropriate strategies (see first knowledge target listed) to solve problems involving quadratic equations, as applicable, to the initial form of the equation.</li> <li>● I can recognize when the quadratic formula gives complex solutions.</li> </ul>	<ul style="list-style-type: none"> <li>● Lesson 9-1: Solving Quadratic Equations Using Graphs and Tables (*Can omit 9-1 if taught in 8-5)</li> <li>● Lesson 9-2: Solving Quadratic Equations by Factoring</li> <li>● NOTE - Topic 6 Lesson 2 involves Radical practice. (*Option: Review 6-2 <b>before</b> lesson 9-3)</li> <li>● Lesson 9-3: Solving Quadratic Equations Using Square Roots ! exclude complex solutions</li> <li>● ! ONLY Middle School -Lesson 9-4: Completing the square - KY.HS.A.19 b(+), c.(+)</li> <li>● Lesson 9-5: The Quadratic Formula and the Discriminant ! exclude complex solutions</li> <li>● <b>3-Act Task:</b> Unwrapping Change</li> </ul>

## High School Algebra 1 Topic 9 - FCPS 2025-2026

### Attending to the Standards for Mathematical Practice

Students reason about which symbolic representation is needed to focus on a particular feature and then efficiently rewrite the literal equations to feature that characteristic (MP.2).

Students analyze the structure of a quadratic equation to determine an efficient strategy to find a solution (MP.7).

### Essential Standards

### Sample Learning Intentions & Success Criteria

### HQIR/Resource Considerations

### Cluster: Represent and solve equations and inequalities graphically.

**KY.HS.A.24** Justify that the solutions of the equations  $f(x) = g(x)$  are the  $x$ -coordinates of the points where the graphs of  $y = f(x)$  and  $y = g(x)$  intersect. Find the approximate solutions graphically, using technology or tables. ★  
**MP.3, MP.5**

Considerations: Students justify solutions for equations that include cases where  $f(x)$  and/or  $g(x)$  are linear, polynomial, rational, absolute value, exponential and logarithmic functions. ★

We are learning how to justify the solutions to the equations.

- I can use graphs and graphing technology to find or approximate solutions to equations.
- I can determine the solutions to equations using graphs and graphing technology.
- I can justify that the solutions of the equations  $f(x) = g(x)$  are the  $x$ -coordinates of the points where the graphs of  $y = f(x)$  and  $y = g(x)$  intersect.

- ! Exclude Lesson 9-6: Solving Systems of Linear and Quadratic Equations - KY.HS.A.21 is NOT an algebra 1 standard

### Attending to the Standards for Mathematical Practice

Students explain that the solutions of a system of equations or inequalities are all the points represented on the graph and therefore, where two functions overlap illustrates solutions to two functions (MP.1, MP.3). Students use technology to determine solutions to a system of linear inequalities (e.g., using DESMOS or graphing calculators) (MP.5).

### Supporting Standards

**KY.HS.N.4** Use units in context as a way to understand problems and to guide the solution of multi-step problems; ★ MP.5, MP.6  
a. Choose and interpret units consistently in formulas;  
b. Choose and interpret the scale and the origin in graphs and data displays.

**KY.HS.N.5** Define appropriate units in context for descriptive modeling. ★ MP.1, MP.6

## High School Algebra 1 Topic 9 - FCPS 2025-2026

**KY.HS.N.6** Choose a level of accuracy appropriate to limitations on measurement when reporting quantities. ★ MP.2, MP.6

**KY.HS.A.2** Use the structure of an expression to identify ways to rewrite it and consistently look for opportunities to rewrite expressions in equivalent forms. MP.7, MP.8

**KY.HS.F.4** Graph functions expressed symbolically and show key features of the graph, with and without using technology (computer, graphing calculator). ★

a. Graph linear and quadratic functions and show intercepts, maxima, and minima.

MP.4, MP.5

**KY.HS.F.5** Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.

a. Identify the graph's zeros, extreme values, and symmetry within the context of a quadratic function.

b. Use the properties of exponents to interpret expressions for exponential functions and classify the exponential function as representing growth or decay. MP.3, MP.6

**KY.HS.F.13** Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly, quadratically, or (more generally) as a polynomial function. MP.7, MP.8

### Vocabulary

axis of symmetry, quadratic function, vertex, vertex form, parabola, standard form of a quadratic function, Zero of a function, Zero product property, Perfect square trinomial, completing the square, Radicand, Discriminant, Quadratic Formula.

\*Disclaimer: Success Criteria is the evidence students must produce to demonstrate learning. This example is not comprehensive.

\*\* Mathematical Practices (A.MP. 1- 8) should be evidenced at some point throughout each unit, depending on the explored tasks. It is important to note that MP. 2 should support learning in every lesson.

\*\*\* Modeling Standards: Modeling is best interpreted not as a collection of isolated topics but rather with other standards. Making mathematical models is a Standard for Mathematical Practice, and specific modeling standards appear throughout the high school standards indicated by a star symbol (★). The star symbol sometimes appears on the heading for a group of standards; in that case, it should be understood to apply to *all* standards in that group.
